

EVENT MANAGEMENT SYSTEM

- First, we will create a index.html page which will contain the overview of
- Website
- There will be a navbar which contains home, events, contact information, about etc.
- Then we will create section in our home page for different events
- Each event section will contain some overview of different events.
(which will contain some event details like venue, date, time, something about the event and a cameo image)
- Then we will add something about the website in the about section.
- Now we will create a login page for logging on to the website.
- And we will also create a registration for registering into the event.
- Then we will create a different subpage for each event.
- And these subpages will contain brief details of each event and their specification.
- We will also create a contact page for our website.
- There will also a e-ticket system for those who have registered for the events.
- Ther will be a payment gateway for paying for tickets.
- And we will further add on things into the website according to our needs.
